

A close-up portrait of a man with brown, wavy hair, a beard, and round black-rimmed glasses. He has a serious, questioning expression. He is wearing a dark green t-shirt. The background is a plain, light-colored wall.

WHAT AREN'T YOU  
being told about  
**CLIMATE  
CHANGE...**

We've been hearing the 'facts' about Climate Change for a long time now but are we being told the whole truth? How would we know if things were being kept from us and how crucial might missing pieces of the puzzle be?

With an open mind, let's see what we might find.

## Climate change : What's the story?

Put simply, the official story is: the more we use our cars, and other CO<sub>2</sub> emitting devices, the more our atmosphere heats up impacting our oceans' temperatures disrupting the global weather system. The main message we're told is that rising CO<sub>2</sub> is 'bad' and that to save our planet and reduce 'global warming' we need to reduce our CO<sub>2</sub> emissions.

## So what are Scientific Facts about CO<sub>2</sub>?

After studying Vostok ice cores from up to 150,000 years ago, scientists discovered that CO<sub>2</sub> levels increase 800 years after an increase in global temperature (same with decreasing temps and levels). Therefore, CO<sub>2</sub> fluctuations are not causing the earth's temperature, they follow it!

This means a rise in CO<sub>2</sub> levels has only a negligible effect on temperature and therefore DOES NOT cause global warming! Furthermore, increased CO<sub>2</sub> levels mean more thriving plant life and therefore more oxygen (O<sub>2</sub>) for humans! Over the past 100 years, we have seen a 15% increase in plant growth, driven by CO<sub>2</sub>! It appears therefore that CO<sub>2</sub> is not something we should be concerned about. In fact, quite the opposite - our ecosystem depends upon it to survive!

## SO WHY IS THE CLIMATE REALLY CHANGING?

So if CO<sub>2</sub> isn't the problem, then what is? Have you heard of weather modification? International agreements, which Australia was included in, were made to explore weather modification and cloud-seeding back in the 1960s.

The Australian government agreed to use drones and aircraft to inject particles of silver dioxide and (later on) other heavy metals and substances into the atmosphere. You would notice this as the hazy white clouds or the sharp white lines that cross the sky commonly known as 'chemtrails.' A considerable amount of scientific research and development has been undertaken in this area. "Cloud-seeding" (rain creation) has become a popular term masking a much broader range of applications that have come to be known as "Geoengineering". In 2007 the Australian government announced they would spend \$10 Million on "Cloud-Seeding" technologies.

Today, rainfall captures and carries these chemtrail toxins to us, into our gardens, farms, oceans and river systems! Geoengineering is a global project having a devastating impact on our weather - weather that is dishonestly being blamed on rising CO<sub>2</sub> levels and 'climate change'! Did you know that hundreds of climate scientists have refused to support the theory that climate change is man-made? Many reputable scientists who were signatories to the UNITED NATIONS DECLARATION on climate change have had to fight fiercely to have their names removed from the global policy document after reconsidering their position based on new data.

See this image taken 19-4-22 at 10:20am in Manly Vale showing the multiple layers of chemtrails at different levels of development.

## So what is the connection between Geoen지니어ing and adverse weather?

There is a lot of literature about this. Scientists who have studied the evolution of our clouds and weather patterns are seeing a massive increase in the number of adverse events following large-scale cloud seeding activities. This is happening not only across Australia, but around the world. Over the past 12 months the east coast of Australia has had a large increase in excessive and irregular rainfall. The floods of March/April 2022 in the Northern Rivers region of NSW are a good example of this. Cloud seeding and geoen지니어ing was heavily practiced in that region in the period leading up to the floods, as predicted by and reported by weather scientists. For some reason, however, we didn't hear about this on the news. Why wouldn't this be of "public interest"? On Sunday 19 December 2021 there was a 'tornado' in the Northern Beaches of Sydney. There were also excessive cloud seeding activities in the lead up to this 'abnormal' weather event. Unfortunately, our councils, governments and commercial news media are not sharing any of this with the public! Why? Quite simply: it will shift the blame away from their targeted and favoured explanation of 'increased CO<sub>2</sub>' emissions.

## The Impact of Geo-Engineering on Our Land

As you can see, the Climate Change discussion is much larger than just the weather. When our governments have been modifying the weather for decades without being honest about it, perhaps there's more here at play and at stake? With the recent flooding in Nth NSW, the government was quick to rush offers of 'buy out' to residents of flood ravaged homes. Why did they do this when they barely even offered assistance

during the floods? Sometimes the truth is not pretty. In fact, sometimes it's pretty ugly! Did you know that if the government declares a region a 'disaster zone', they are entitled to repossess the land under the disturbingly vague claim of 'global climate change' - and there's nothing you can do about it!

Let's look at the 2019 bushfires where this happened for example. What's interesting is the locations of the bushfires, and the homes being repossessed - they all lay directly within the region mapped out for a Smart City rail network. In 2019, Consolidated Land and Rail Australia Pty Ltd (CLARA) formulated a \$200 billion proposal to create sustainable smart cities across Victoria, New South Wales and Brisbane - connected by their Smart City high speed rail network. Much of the proposed network is occupied by towns, that strangely (or not so strangely) are now experiencing adverse weather events and residents are being offered to hand their property over to the government. The local governments are talking increasingly about these Smart Cities and promoting them as the way of the future - the truth is they will require whole communities to be wiped out and rebuilt! How is this a bad thing, you may ask? Put simply: Smart Cities are designed for many purposes including but not limited to keeping people under 24-hour surveillance using high-powered internet capabilities - like something out of a sci-fi horror movie!

Some phrases you may have heard that speak to this agenda are the "Internet of Things" (IOT) and the even more ominous-sounding "Internet of Bodies" (IOB) The language of our elected politicians (when they speak about Smart Cities) is the same used by the people driving the World Economic Forum and global agenda.

## Climate Change and Agenda 2030

If you haven't heard of Agenda 2030 or 'The Great Reset' yet, then you may have heard of Klaus Schwab. He's the German billionaire economist who founded the World Economic Forum (WEF). The WEF aims to influence countries worldwide on economic matters. Over the past couple of years, we've heard a lot more from him including his infamous line in the WEF promotional video (8 Predictions for Life in 2030) "You will own nothing and you will be happy." Many global leaders are using the same language and parroting his lines. The WEF's plan for the United Nations Agenda 2030 isn't kind; it's actually a framework of control over the planet. Agenda 2030's plan is outlined in detail on their website, and includes things like a Universal Basic Income, Global Centralised Digital Currency, a Social Credit System (similar to communist China), a

Centralised Digital ID - and much more! In 2016 the Australian Government signed the Paris Agreement, binding us to an international treaty to set targets to limit global warming and reverse the effects of 'climate change' - Australia identified the Smart Cities (mentioned above), as the 'model cities' of this treaty and agreed to adopt the plans of Agenda 2030 by the WEF.

We must remember that the Climate Change targets are based on CO2 emissions, therefore any increase in adverse weather caused by geoengineering is not tracked or reported on by our government!

When you're out for your next walk and see wispy, white-lined skies, perhaps now you realise this is not innocent or natural. This is part of a much bigger web of activities designed to create a future not in your best interests.
